

Press Release

13th December 2007

TURBO POWER SYSTEMS

CONTRACT WIN

Turbo Power Systems Plc ('TPS' or 'the Company'), the innovative electrical machines and electronic systems provider, today announces that it has now received the new order for its high speed motor and drive technology previously described as imminent in the Quarter 3 2007 results.

This order represents the first production release against the Memorandum of Understanding with the major international capital equipment manufacturer, announced in November 2005. The initial quantity of 75 systems valued at approximately \$2M, which will all be delivered during 2008, is intended to provide initial volumes to support anticipated customer demand following the formal product launch next year. The MoU includes an undertaking to purchase 500 such systems in the first two years of production and an exclusive manufacturing period for an initial term of 5 years.

Commenting on the contract wins, Michael Hunt, CEO, said: "The receipt of this order is great news for TPS and demonstrates the potential of our electrical machines division at Heathrow. The new contract is evidence of the increasing commercialisation and wide ranging appeal of our energy efficient, high speed machine technology. Along with the other order announced with our Q3 results, this expands the range of applications that our core technology can be used for."
