TURBO POWER SYSTEMS ANNOUNCES FURTHER PRODUCTION ORDERS FOR LOW EMISSION RAIL YARD LOCOMOTIVE ELECTRONICS

Turbo Power Systems ("TPS") is pleased to announce that it has received further orders from the National Railway Equipment Co. (NREC) of the US, for traction motor controllers and low voltage power supply units in support of their low emissions locomotives.

The additional orders cover locomotives being supplied to several customers in both North American and international markets, and they reflect the growing customer interest in the innovative rail-yard shunter.

The new orders will add a further £1.2M to the value of contracts received from NREC to date against the long term supply agreement, and all equipment relating to the new orders is scheduled to be delivered before the end of 2007. TPS announced the initial long term supply agreement with NREC in February 2006 and additional orders worth US\$700,000 in November of 2006.

Michael Hunt, CEO of TPS commented "NREC are making considerable progress in identifying markets in North America, Europe and Australasia, and we are very pleased to be involved with such an environmentally sound and technically innovative product."

NOTES TO EDITORS

About Turbo Power Systems

Turbo Power Systems Inc. designs and manufactures innovative power solutions which provide local, high quality, controllable electrical power. The Group's products are sold into a number of markets but are all based on its core technologies of power electronics and high speed electrical machines.

The Group operates across the following market sectors:

- Direct Drive High-Speed Electrical Machines and Electronics
- Specialist Drives and Motor applications (Aerospace, Oil and Gas)
- High Voltage Power Supplies, Auxiliary Power Systems, Grid-Connected Inverters for Energy Recovery Systems and Renewable Technologies

Forward Looking statements

This news release contains forward-looking statements. Forward-looking statements include statements concerning plans, objectives, goals, strategies, future events, or performance, and underlying assumptions and other statements that are other than statement of historical fact. These statements are subject to uncertainties and risks including, but not limited to, the ability to meet ongoing capital needs, product and service demand and acceptance, changes in technology, economic conditions, the impact of competition, the need to protect proprietary rights to technology, government regulation, and other risks defined in this document and in statements filed from time to time with the applicable securities regulatory authorities.
